

HTML tutorial created by Margaret Desjardins

Formatting

To have it look like this...	Type this...
<i>Your text here</i> (Italics)	<code>Your text here</code>
Your text here (bold)	<code>Your text here</code>
Your text here (blue text)	<code>Your text here</code>
Your text here (brown text)	<code>Your text here</code>
Your text here (gray text)	<code>Your text here</code>
Your text here (green text)	<code>Your text here</code>
Your text here (orange text)	<code>Your text here</code>
Your text here (purple text)	<code>Your text here</code>
Your text here (red text)	<code>Your text here</code>
	<code>Your text here</code>
	<code>Your text here</code>
This is header 1	<code><h1>This is header 1</h1></code>
This is header 2	<code><h2>This is header 2</h2></code>
This is header 3	<code><h3>This is header 3</h3></code>
This is header 4	<code><h4>This is header 4</h4></code>
This is header 5	<code><h5>This is header 5</h5></code>
This is header 6	

See many more color names at http://www.w3schools.com/html/html_colornames.asp

Bulleted List

To create a bulleted list, a `` begins the list and a `` closes the list. Each item in the list needs to have a `` before the item and a `` after the item. See the example below:

To have it look like this...	Type this...
<ul style="list-style-type: none"> • First item • Second item 	<code> First item Second item </code>

Numbered List (very similar)

To create a numbered list, a `` begins the list and a `` closes the list. Each item in the list needs to have a `` before the item and a `` after the item. See the example below:

To have it look like this...	Type this...
1. First item 2. Second item	<pre> First item Second item </pre>

Linking to another URL

To have it look like this...	Type this...
The Gnomes' blog	<pre>The Gnomes' blog</pre>

The part after **href=** that is in double quotations will be the URL for your link. The part after the **>** and before the close **** will be the text that is highlighted for the user to click on.

Combining Things

To have your header look like this...	Type this...
A red header	<pre><h2>A red header</h2></pre>
Italicized <i>red</i> header	<pre><h2>Italicized red header</h2></pre>
Bold green text	<pre>Bold green text</pre>

Adding Additional Photos

This will work best if you upload the photos you want in the body of your blog first, and upload the one you want to open with last.

1. Upload your first photo via Drupal Edit interface (don't start with the first photo you want to open your blog with).
2. After you have published your blog, go back to your blog and view in Edit mode.
3. In the browser's pulldown menu, under "**view**" go to "source" (called "page source" in Firefox and "View Source" in Safari).
4. Find the link for the photo you most recently uploaded to your blog. The easiest way to do this is to search for the first few words of your blog. The link will immediately precede the first words of your blog and it will look something like this:

```
<a href="/City+Hall+Annex"></a>
```

5. Copy the link into the sandbox where you want your photo to appear.
6. If you want your photo to be on the RIGHT (just for variety), make this change to the link:
